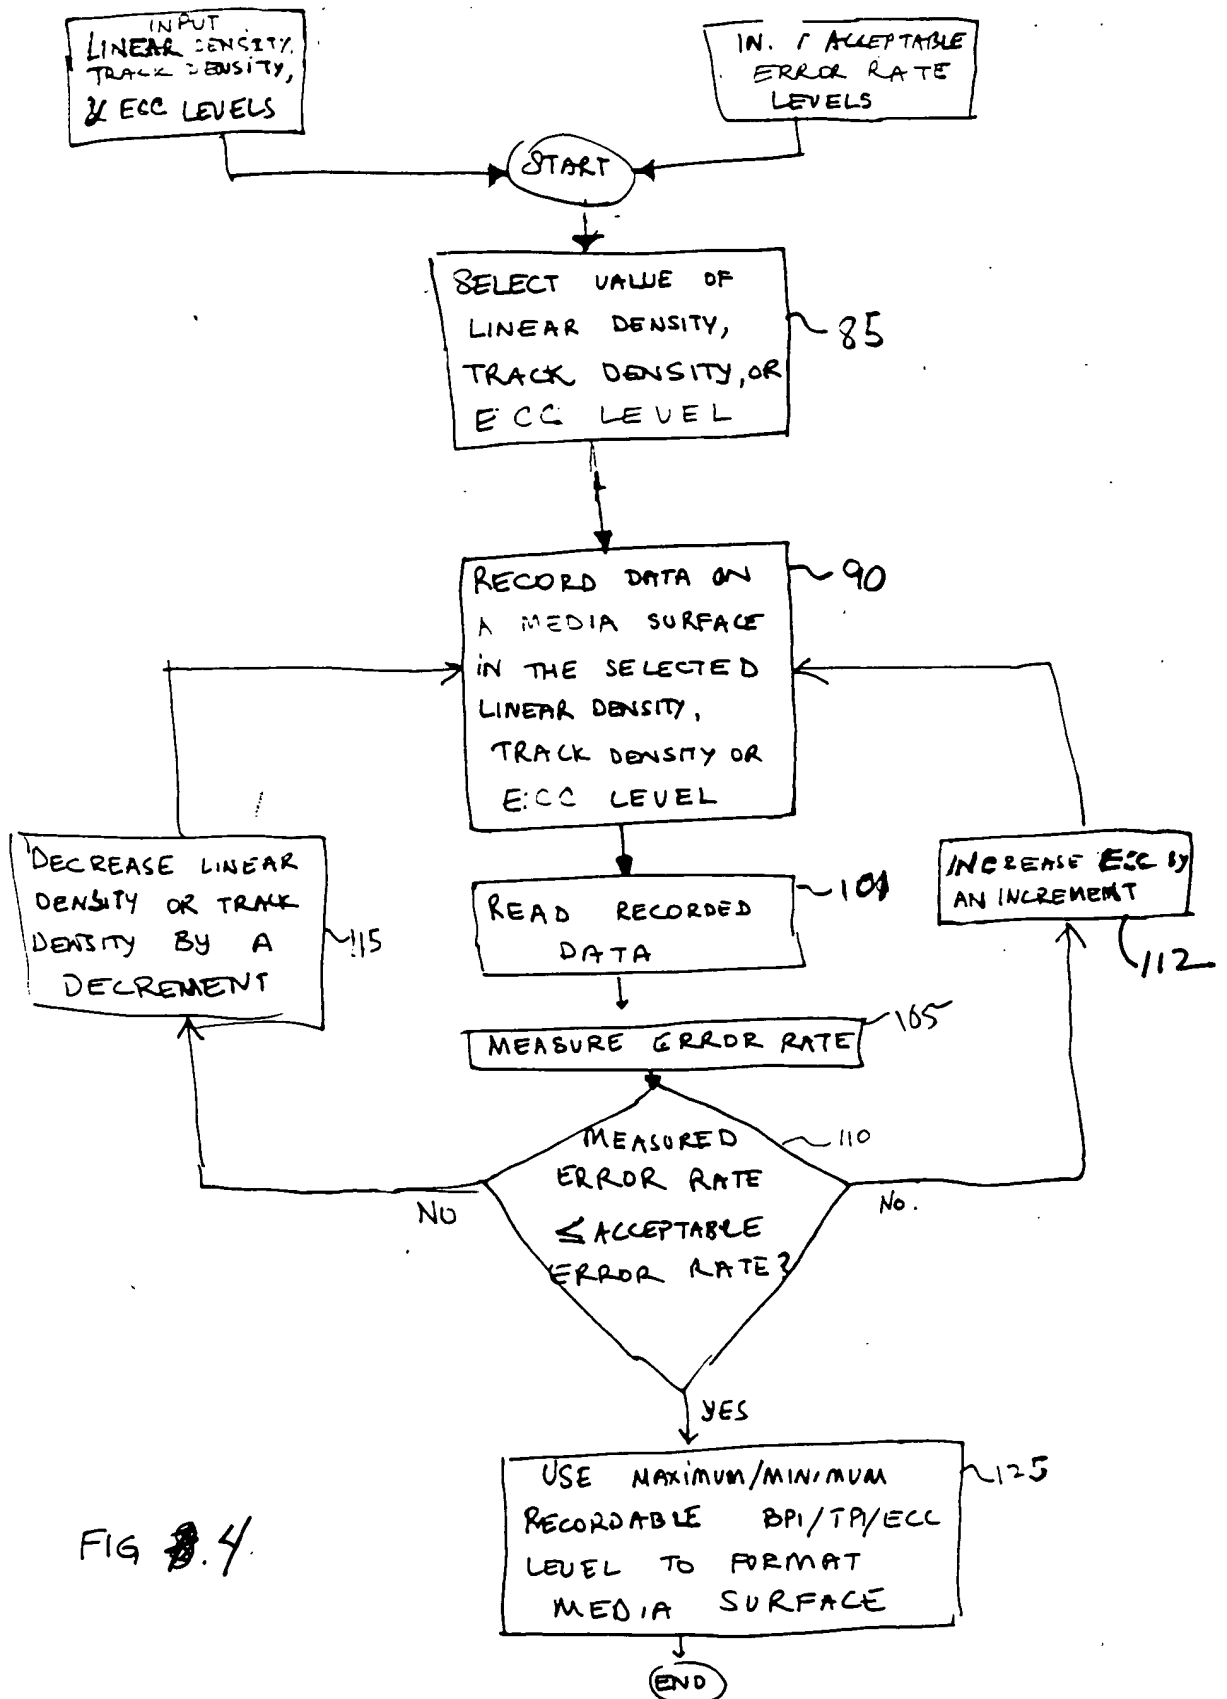

FIG 4.

1. The error rate is defined as the number of errors per byte.
 2. The error rate is calculated as the number of errors divided by the number of bytes.
 3. The error rate is expressed in scientific notation.

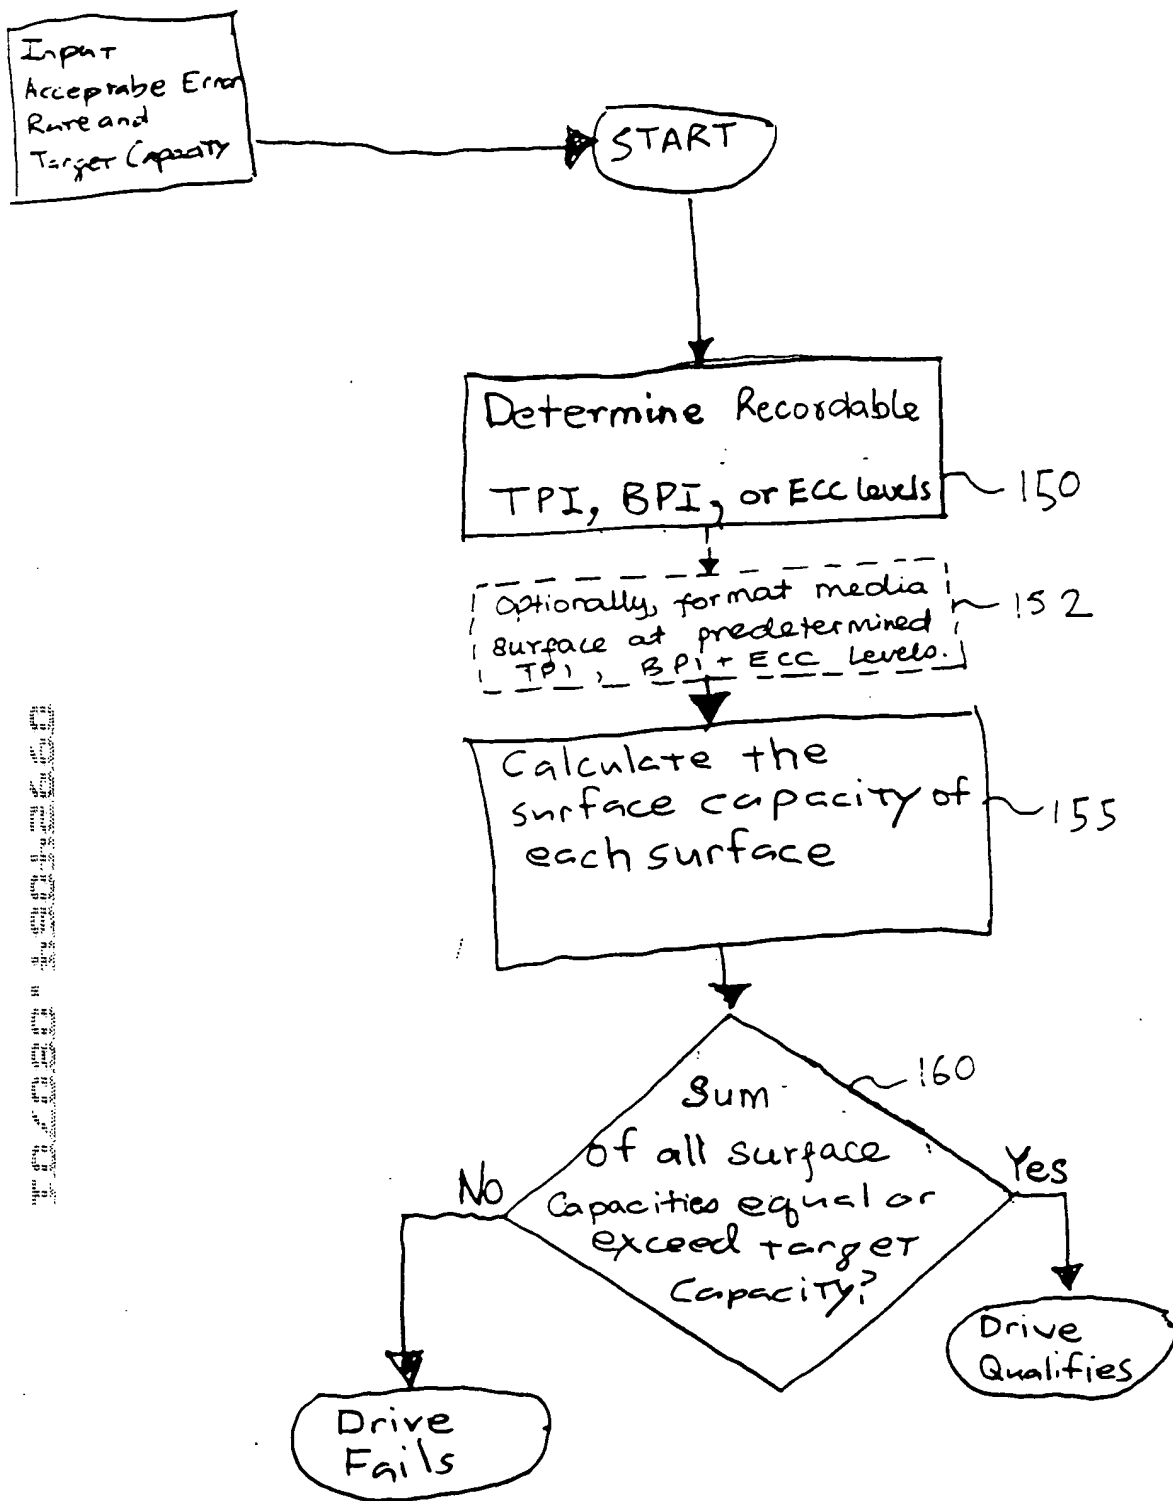

Fig. 5b

$\eta = \frac{r}{\sigma}$ is the ratio of the radius of the cylinder to the thickness of the shell. The function $f(\eta)$ is defined by the equation $f(\eta) = \frac{1}{2} [1 + \frac{1}{\eta^2} \ln(1 + \eta^2)]$. The function $f(\eta)$ is plotted in Fig. 7.
